PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building enterprise-grade web applications and high-throughput microservices using Java, Spring Boot, Spring Integration, Python, TypeScript, React/Next.js, and PostgreSQL. Currently engineering scalable microservices for the Loan Processing Platform (LPP) at TCS for client ICICI Bank, standardizing reusable enterprise frameworks across security, logging, and KYC workflows. Previously developed compliance microservices at Mphasis for FedEx handling 70,000+ daily scans. Active builder of high-performance, AI-powered systems including LinkedApply Pro (Chrome Extension), DeGhost (Real-Time AI Interview Integrity), and Kafka URL Shortener. Skilled in end-to-end delivery from database architecture to CI/CD deployment, leveraging GitHub Copilot and modern AI tools to accelerate engineering velocity. Strong foundation in Data Structures, Algorithms, and System Design, with 300+ LeetCode problems solved. Certified SAFe 6 Practitioner and Microsoft Azure Fundamentals (AZ-900).

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL
Backend: Spring Boot, Spring Integration, Spring Security, Spring Cloud, Spring Batch, Hibernate, FastAPI, Flask, REST APIs, Microservices
Frontend: Angular, React, Next.js, WebSockets, HTMX, Alpine.js, HTML5, CSS3, Tailwind CSS, Thymeleaf
Databases: PostgreSQL, MongoDB, MySQL, Supabase, Redis, asyncpg, SQLAlchemy
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, IAM), Microsoft Azure, Docker, Jenkins, SonarQube, Maven, CI/CD
Messaging & Caching: Apache Kafka, RabbitMQ, Redis, Resilience4j, Flyway, HikariCP, Bucket4j
Testing: JUnit, Mockito, Jasmine, Karma, Jest, JaCoCo, Testcontainers
Tools: Git, GitHub Copilot, Postman, Swagger, Figma, Splunk, Zipkin, Chrome Extension (MV3), IntelliJ IDEA, VS Code
CS Concepts: Data Structures and Algorithms, System Design, Distributed Systems, Design Patterns, SOLID Principles

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS) — Software Engineer | Client: ICICI Bank — August 2026 – Present | Hyderabad, India

Project: Loan Processing Platform (LPP)

- Engineered and maintained core banking microservices for the Loan Processing Platform (LPP), a high-scale framework built on Spring Boot and Spring Integration standardizing reusable components across security, logging, request/response handling, caching, circuit breakers, and integration gateways.
- Developed business logic and relational database operations for the KYC (Know Your Customer) microservice for client ICICI Bank, powering automated customer onboarding, verification, underwriting, and disbursement workflows.
- Integrated external enterprise banking interfaces including Business Rule Engine (BRE), CIBIL credit scoring, Document Management System (DMS), and core banking systems via fault-tolerant REST APIs.

Mphasis Ltd — Associate Software Engineer | Client: FedEx — Apr 2023 – July 2026 | Hyderabad, India

Project: Global Regulatory Compliance System (GRCS)

- Engineered scalable Compliance, Scanning and Reporting microservices for interception, segregation, and dynamic assignment of packages to outbound containers for Commercial Line Haul Flights based on strict regulatory properties.
- Designed and developed RESTful APIs for Filter, Split, Super Split, MHC, and SLC modules, processing 70,000+ volume scans per hub daily across 120+ global HUB locations.
- Developed a configurable compliance scanning engine with intercept rules (MHC/SLC) to validate shipments against customs regulations, decreasing compliance violations by 35%.
- Enforced rigorous code quality by embedding JUnit/Mockito tests and SonarQube quality gates into Jenkins CI/CD pipelines, achieving 85%+ code coverage and zero critical vulnerabilities.
- Leveraged Splunk for centralized logging with correlation IDs, real-time monitoring, and root cause analysis, reducing average incident resolution from ~2 hours to ~1 hour.
- Collaborated in SAFe Agile teams, participating in daily standups, sprint planning, backlog grooming, PI planning, and peer code reviews.

INTERNSHIP

Murven Design Solutions — Software Engineering Intern Nov 2022 – Jan 2023 | Remote, India

- Developed RESTful APIs using Python Flask for file upload, download, and AI-based background removal features for a design platform.
- Integrated AWS cloud services including Lambda, S3, EC2, and IAM for serverless processing and scalable storage.
- Deployed Stable Diffusion ML models via Google Colab for AI-powered image generation workflows.

PERSONAL PROJECTS

LINKEDAPPLY PRO — AI Auto-Applier & Real-Time Resume Tailorer | Chrome Web Store May 2026 – Present

Tech: TypeScript, React, Python FastAPI, Chrome Extension (MV3), BYOK AI (Gemini/OpenAI)

- Solved low ATS callback rates by engineering an auto-applier that dynamically parses each job's JD and auto-tailors resume content into a chosen default template before applying.
- Implemented real-time ATS scoring and multi-step form automation using a FastAPI bot backend with zero subscription cost via client-side BYOK AI integration.

DEGHOST — Real-Time AI Interview Integrity & Cheat Detection Platform | Live Demo April 2026 – Present

Tech: Python, FastAPI, WebSockets, PostgreSQL, SQLAlchemy, HTMX, Alpine.js, FPDF2

- Engineered an anti-cheat detection engine identifying 65+ stealth AI assistance tools, transparent window overlays, teleprompters, and virtual cameras during live remote interviews with low latency.
- Architected an async FastAPI & WebSocket backend featuring live candidate integrity scoring (0–100%), automated threshold-based risk flagging, and instant tamper-evident PDF forensic audit report generation for hiring teams.

HIGH-THROUGHPUT EVENT-DRIVEN URL SHORTENER & ANALYTICS PLATFORM | GitHub March 2026 – Present

Tech: Java, Spring Boot, Apache Kafka, Redis, PostgreSQL, Docker, Flyway, Bucket4j, Thymeleaf

- Architected an event-driven pipeline using Apache Kafka to decouple click analytics from redirect execution, cutting latency from ~18ms to ~4ms while ensuring zero-loss graceful degradation during database outages.
- Designed a high-concurrency Spring Boot backend featuring collision-free Base62 encoding, dual-key Redis caching (short:code & long:url), Bucket4j API rate limiting (20 req/min per IP), and 100% test coverage across 25 tests enforced via JaCoCo.

ACHIEVEMENTS

- Published LinkedApply Pro to the official Google Chrome Web Store, automating job applications with client-side BYOK AI at zero recurring infrastructure cost.
- Engineered and deployed DeGhost live MVP on Render, architecting real-time WebSocket candidate integrity scoring against 65+ AI cheating tools.
- Engineered High-Throughput URL Shortener with 100% test coverage across 25 unit/integration tests (JaCoCo) and <4ms redirect latency via Apache Kafka.
- Solved 300+ problems on LeetCode using Java, including Hard-level problems across arrays, trees, graphs, and dynamic programming.

EDUCATION

BACHELOR OF TECHNOLOGY — Information Technology 2018 – 2022 | CGPA: 7.97

Pondicherry University

Coursework: Data Structures and Algorithms, Database Systems, Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering

- Final year project: Lung Cancer Prediction Model using deep learning with ResNet-50 for medical image-based cancer detection, published at IJARBEST and received Best Paper Award.
